

Condition A: 2-source candidate pool [E_{Income} , E_{Marital}], $K = 2$

$$W_{\text{Income}} = 0.62$$

$$W_{\text{Marital}} = 0.38$$

FW = 1/2

$$x_{\text{trans}} = \sum W_i \cdot x_{\text{t}}^i$$

Condition B: 3-source candidate pool [E_{Income} , E_{Marital} , $E_{\text{Education}}$], $K = 3$

$$W_{\text{Income}} = 0.47$$

$$W_{\text{Marital}} = 0.3$$

$$W_{\text{Education}} = 0.23$$

FW = 1/3

↓ 0.15

↓ 0.08

$E_{\text{Education}}$ dilutes W_{Income} and W_{Marital}

$$x_{\text{trans}} = \sum W_i \cdot x_{\text{t}}^i$$
